

Wall Mount Closet

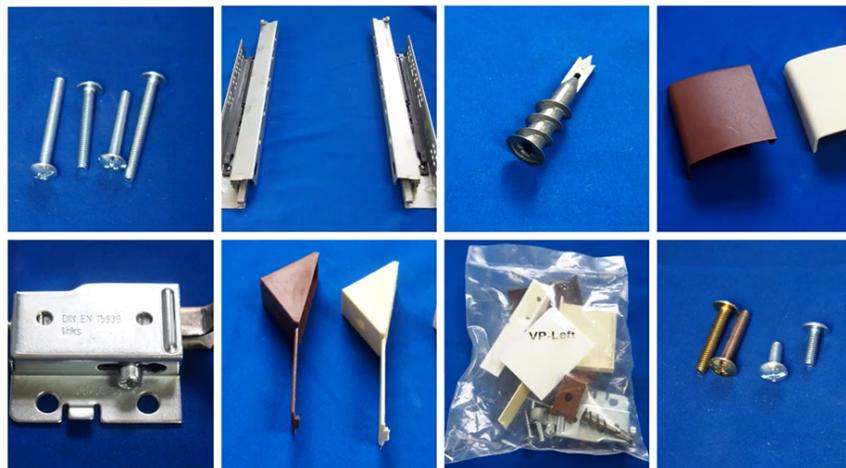

Installation Guide

NOTE: This instruction sheet is for informational purposes only. Your working environment may differ from what is shown in the pictures. Please determine location of wiring and plumbing before you begin.

It is your responsibility to ensure proper installation and, if in doubt, contact customer service.

While our products are designed for homeowner installation, you assume all risk associated with the installation process. If you so choose you may refer to our video (<https://youtu.be/YzIWSTAjRc>) for these instructions.

Please be sure to check all hardware is present. The below picture shows some typical hardware but is not a complete list. Depending on how your order was designed pieces may vary. Please refer to the parts list that was sent with your order to verify all pieces are accounted for.

You will also need some tools. We recommend the following:

- Power Drill
- Screwdriver
- Level

Installation Guide

You may also need a saw to make cuts, particularly if your system uses a bridge shelf and needs to be cut to size.

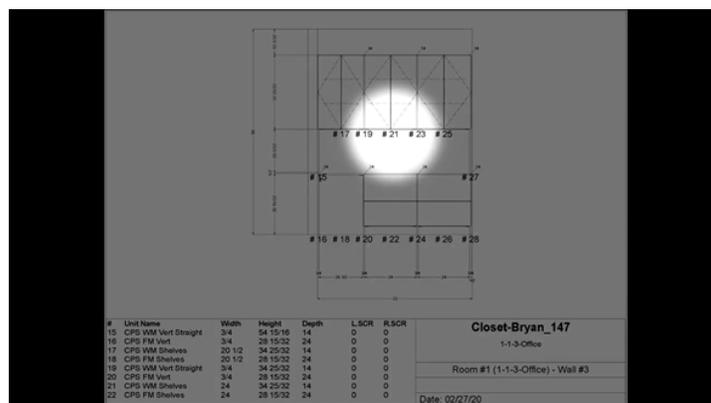

Identifying Your Closet Components

Each part of your closet is labeled. Each label contains pertinent information to the location of these pieces in the closet system. Below is an example of one of the labels.

This label correlates with the blueprint (Elevations) that were sent with your closet. The label tells you the name of the part, the measurement and color/material, what job it is for (if multiple closets were ordered), what room it is for (if multiple rooms in the same house were ordered) and finally the Cab# which matches the blueprint. There is also an illustration of what the part is supposed to look like on the label.

Next you see a picture of the blueprint.

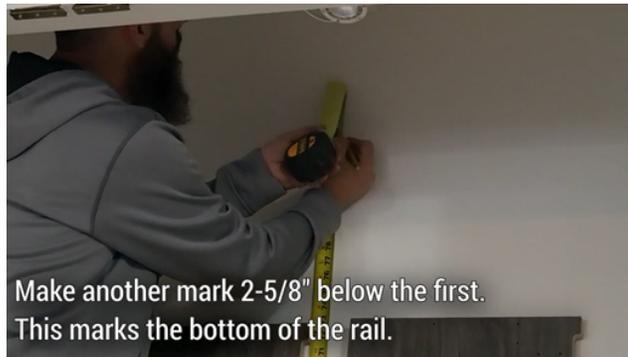

As you see in the highlighted section this part number is circled on the blueprint. This identifies where this piece goes. Each part label corresponds to a number on the diagrams. Each partition has its own unique number and each section has all parts sharing the same number (For example, a section with 5 adjustable shelves and 2 fixed shelves would all share the same cabinet number).

Wall Mount Closet

Installation Guide

Proceeding to Installation

First you must secure the hang rail to the wall. Refer to your drawings to find the top shelf height. Measure and mark that height on your wall. Then make another mark 2 5/8" below the first mark. This will mark the bottom of the rail:

Using a level as a guide clearly mark a line across the width of the closet:

Next locate the studs and mark where they are:

Wall Mount Closet

Installation Guide

If the end of a section does not end at a stud you can use an anchor to secure the rail to the wall here. Make sure the hangrail is securely mounted to the wall before proceeding with the installation:

The next step is to attach the suspension brackets to the panels as shown below:

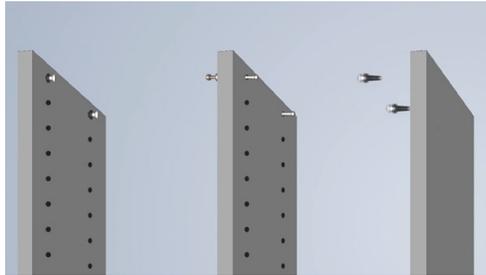

Next hang the vertical panels on the rail as shown:

Wall Mount Closet

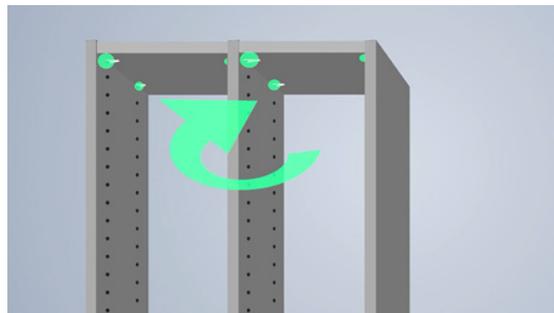

Installation Guide

Next insert your connector pins into the vertical panels. Be sure to use single pins in the end panels and the double pins on any center panels with holes bored all the way through. See the below illustration:

Also note that depending on the height of your closet there may be an additional fixed shelf requiring these pins in the center.

After the pins are in place you will next take the top and press the cams down on the connector pins. Once in place you will tighten the cams in a clockwise direction using a screwdriver:

Once the closet is in place ensure that the system is level and plumb before fastening it to the wall:

Wall Mount Closet

Installation Guide

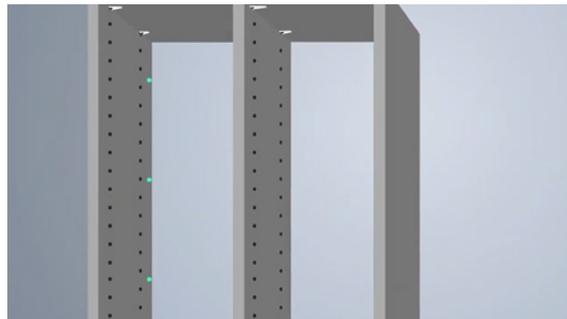

You can use the suspension brackets to adjust for levelness:

Once the system is level secure it to the wall using the provided L brackets on the top and bottom:

You may wish to secure the side panels to the wall. If you do use wood screws to hit the stud at the back corner:

Finally, install your adjustable shelf pins where you want them and insert the adjustable shelves into the closet resting on these pins:

Wall Mount Closet

Installation Guide

If you have any drawers or additional accessories please refer to the instructions for each of them individually.
